CERAMIKA PARADYŻ CERTIFICATES

LAYING TILES

1. Activities before starting the work

The work must be started with accurate checking the tiles and marking the quality of the ceramic Material. In the case of the tiles laid on one surface, the tint designation should be homogeneous. It is necessary to lay the elements of the collection on a given surface only from one batch. It will eliminate possible slight differences in the colouring of the neighbouring tiles.

2. Preparation of the subfloor

The next very important step is to prepare the subfloor, which needs to be accurately cleaned. It is necessary to check the floor level, its load bearing capacity and dampness.

The next stage is the surface priming in order to unify the absorbance through the application of the relevant preparations. If there are any irregularities on the surface on which we intend to lay the tiles, we can eliminate them by means of the self-levelling mix. However, when the irregularities are felt very strongly and there are significant level differences, the whole uneven floor is worth demolishing.

3. Laying tiles

The tiling process must be started from planning the dry floor tiling and establishing the axis according to which the floor will be tiled. There are no tiles which are ideally straight. Most ceramic tiles have in accordance with the norm requirements curvatures. This may be particularly visible in such long and narrow products. In order to eliminate the possible deflections which may be produced during the process of gluing the tiles, we lay them with a maximum shift to 1/3 of the length of the neighbouring tile. We advise you against laying this type of products with a shift by 1/2 of the length. This will allow a similar effect as in the case of planks or panels to be achieved, and at the same time, smooth and level floor surface will be ensured. After the tiles are arranged, we collect the tiles and lay them in stages with distance crosses on the uniformly spread joint mortar. The layer of mortar should be about 5 mm thick. In order to obtain it, a 10 or 12 mm comb will be needed. For the glazed porcelain tiles, we recommend glues of the C2 grade. It is best to leave the performance of additional cuts of the tiles as well as their layment for the next day. After the joint mortar hardens, we remove the distance crosses and clean the surface from dust with a wet sponge. The joints may also be cleaned by means of a vacuum cleaner.

4. Tile grouting

For large-forMat tiles, apply the appropriate size of grouts. In the case of the glazed porcelain tiles collection, the joints should have the width of over 2 mm. Before grouting is started, it is worth carrying out a test at an inconspicuous place. This will allow us to determine the time needed for setting the joint mortar. If we are anxious to avoid dirt and dust, we can apply the epoxy grout, which is more resistant to them. The compound prepared in this way must be applied by means of a trowel with a sponge. The tiles are grouted in batches on an area that is not larger than 3-4 m². At the contact of the horizontal and vertical surfaces, the joint should be silicon. The grouted floor is cleaned in 2-3 stages. After the initial setting of the grouts, we clean them with a wet sponge obliquely to their direction. In order to get the right effect of the ceramic surface appearance, grouting must be done according to the instruction.

While applying the tiling principles described above, collection guarantees the excellent effect of uniformly "timber" floor maintaining at the same time the high quality of stoneware tiles.

SCHEMES OF LAYING FLOOR TILES

Examples of modular connection of formats from the collection:

9,8×89,8

>1/3

<1/3

It is recommended to lay tiles off-set of one element against the other by no more than 1/3 of the tile length.

assembly scheme of 2-elements skirting boards

COLLECTIONS TONALITY

tonality based on exemplary collections and formats

Each tile in a pattern is unique and may show slight differences in tone.

RINO GRYS SEMI-POLISHED 59,8x59,8

COLLECTIONS TONALITY

tonality based on exemplary collections and formats

Each tile in a pattern is unique and may show slight differences in tone.

VIANO ANTRACITE BASE TILE 30×60

ARKESIA MOCCA MATT / GLOSSY STRUCTURE 29,8×59,8

TECHNOLOGICAL CHARTS

Tiles are produced in compliance with EN 14411 norm, however stair treads production of special ceramic products is based on compliance with internal Ceramika Paradyż Sp. z o.o. norm. Special ceramic products are: skirting boards, cut out inserts, cigars, londons, raccordos, cut out strips glue on mesh, step treads, mosaics. Dry pressed ceramic tiles and special ceramic products with low water absorption level $E_b \leq 0,5\%$ – Group BI₁.

Requirements for dry-pressed ceramic tiles, with low water absorbance, BI₁ Group ($E_b \leq 0.5\%$) UGL and GL				
Properties	Requirements for the nominal size <i>N</i>			Research method
	7 cm ≤ <i>N</i> < 15 cm (mm)	(%)	<i>N</i> ≥ 15 cm (mm)	
SURFACE MEASUREMENTS AND QUALITY				
Length and width				EN ISO 10545-2
Acceptable deviation of the average measurement of each tile (2 or 4 sides) from the working measurement (W).	± 0,9 mm	± 0,6 %	± 2,0 mm	
Thickness	Declared thickness			
a) Thickness should be determined				
b) Acceptable deviation of the average thickness of each tile from the thickness of the working measurement	± 0,5 mm	± 5 %	± 0,5 mm	
Side curvature; visible surfaces				
Acceptable deviation from a straight line, in reference to the relevant working measurements.	± 0,75 mm	± 0,5 %	± 1,5 mm	
Rectangularity				
Maximum acceptable deviation from the right angle, in reference to the relevant working measurements.	± 0,75 mm	± 0,5 %	± 2,0 mm	
Surface flatness				
Maximum acceptable deviation from flatness:				
a) Curvature of the middle, in reference to the diagonal calculated on the basis of the working measurements;	± 0,75 mm	± 0,5 %	± 2,0 mm	
b) Curvature of the sides, in reference to the relevant working measurements;	± 0,75 mm	± 0,5 %	± 2,0 mm	
c) Distortion in reference to the diagonal calculated on the basis of the working measurements.	± 0,75 mm	± 0,5 %	± 2,0 mm	
Surface quality	At least 95 % of tiles should not have visible defects that would cause visible deterioration of tiles' appearance on the considerable part of the surface.			
PHYSICAL PROPERTIES				
Water absorbance (in % of mass)	$E_b \leq 0.5\%$ For a single tile maximum 0.6 %			EN ISO 10545-3
Breaking force for:				EN ISO 10545-4
a) Thickness ≥ 7.5 mm	No less than 1300 N			
b) Thickness < 7.5 mm	No less than 700 N			
Resistance to bending	Minimum 35 N/mm ² For a single tile minimum 32 N/mm ²			
Anti-slip properties [R]	Research method used			CEN/TS 16165
Frost resistance	Frost resistant			EN ISO 10545-12
Thermal shock resistance	Research method used			EN ISO 10545-9
Resistance to deep abrasion of non-glazed tiles: volume of old MATTerial	Maximum 175 mm ³			EN ISO 10545-6
Resistance to surface abrasion of glazed floor tiles	Non-abrasion category and number of spins			EN ISO 10545-7
Resistance to stains for:				
a) Glazed tiles	Minimum Category 3			EN ISO 10545-14
b) Non-glazed tiles	Research method used			
Resistance to household chemical substances and salts used in swimming pools	Minimum Category B			EN ISO 10545-13
